Dear Hiring Manager,

I am writing to express my interest in the Creative Technologist Lead role at PMG. I am a creative technologist and software engineer who works with creative coding tools on a daily basis to build interactive experiences, experimenting with motion, dimension, and new ways of engaging people on the web. My work has been recognized across multiple platforms.

As one of the organizers of Creative Coding NYC, I lead weekly meetups, coordinate collaborations, and create promotional content and the website. I work closely with designers, artists, and developers to share their work and bring people together around creative technology.

I recently completed a 12-week program at the Recurse Center in Brooklyn, where I built Poster BluePrint, an AI tool that identifies poster design elements that can be recreated with code, and 3D Motion Marbling, an interactive experience that turns live hand movements into a virtual marbling comb. These projects combine my interests in computer vision, creative tools, and interactive development.

I have also worked closely with small businesses, managing websites and inventory and helping a social media account grow from hundreds to thousands of followers. This work has involved understanding each business's needs and translating them into practical technical and creative solutions. I also have many hours of experience training AI models, following a professional Git workflow in which my code goes through reviewer feedback before it is merged.

I would welcome the opportunity to bring this combination of creative coding, development, and hands-on client collaboration to PMG.

Thank you for your time and consideration.

Kind regards,
Holland Blumer
